STATEMENT

Purpose

To define and describe the accepted indications for Lumakras (sotorasib) usage in the treatment of cancer, including FDA approved indications, and off-label indications.

Evolent is responsible for processing all medication requests from network ordering providers. Medications not authorized by Evolent may be deemed as not approvable and therefore not reimbursable.

The use of this drug must be supported by one of the following: FDA approved product labeling, CMS-approved compendia, National Comprehensive Cancer Network (NCCN), American Society of Clinical Oncology (ASCO) clinical guidelines, or peer-reviewed literature that meets the requirements of the CMS Medicare Benefit Policy Manual Chapter 15.

INDICATIONS

Continuation requests for a not-approvable medication shall be exempt from this Evolent policy provided

- The member has not experienced disease progression on the requested medication AND
- The requested medication was used within the last year without a lapse of more than 30 days of having an active authorization AND
- Additional medication(s) are not being added to the continuation request.

Colorectal Cancer

- Lumakras (sotorasib) may be used in combination with panitumumab for the treatment of adult members with KRAS G12C-mutated metastatic colorectal cancer (as determined by an FDA approved-test), who have received prior fluoropyrimidine-, oxaliplatin- and irinotecan-based chemotherapy.

Non-Small Cell Lung Cancer (NSCLC)

- Lumakras (sotorasib) may be used as monotherapy for adult members with locally advanced or metastatic NSCLC, who have received prior therapy with platinum-based chemotherapy, with or without immunotherapy, and have disease that is positive for the KRAS G12C mutation (confirmed by any standardized test).

CONTRAINDICATIONS/WARNINGS

- None

EXCLUSION CRITERIA

- Disease progression while taking Lumakras (sotorasib) or on prior KRAS G12C-

targeted therapy [e.g., Krazati (adagrasib)].

- Lack of confirmed documentation of the KRAS G12C mutation.
- Dosing exceeds single dose limit of Lumakras (sotorasib) 960 mg.
- Treatment exceeds the maximum limit of 240 (120 mg), 120 (240 mg), or 90 (320 mg) tablets/month.
- Investigational use of Lumakras (sotorasib) with an off-label indication that is not sufficient in evidence or is not generally accepted by the medical community. Sufficient evidence that is not supported by CMS recognized compendia or acceptable peer reviewed literature is defined as any of the following:
 - Whether the clinical characteristics of the patient and the cancer are adequately represented in the published evidence.
 - Whether the administered chemotherapy/biologic therapy/immune therapy/targeted therapy/other oncologic therapy regimen is adequately represented in the published evidence.
 - Whether the reported study outcomes represent clinically meaningful outcomes experienced by patients. Generally, the definitions of Clinically Meaningful outcomes are those recommended by ASCO, e.g., Hazard Ratio of less than 0.80 and the recommended survival benefit for OS and PFS should be at least 3 months.
 - Whether the experimental design, considering the drugs and conditions under investigation, is appropriate to address the investigative question. (For example, in some clinical studies, it may be unnecessary or not feasible to use randomization, double blind trials, placebos, or crossover).
 - That non-randomized clinical trials with a significant number of subjects may be a basis for supportive clinical evidence for determining accepted uses of drugs.
 - That case reports are generally considered uncontrolled and anecdotal information and do not provide adequate supportive clinical evidence for determining accepted uses of drugs.
 - That abstracts (including meeting abstracts) without the full article from the approved peer-reviewed journals lack supporting clinical evidence for determining accepted uses of drugs.

CODING AND STANDARDS

Codes

- J8999 - sotorasib
